Information Letter China-RoHS-requirements (GB/T 26572, SJ/T 11364)

Dear business partners,

In connection with international chemical and substance regulations, we regularly receive questions about the classification of our products according to the requirements of the Chinese RoHS regulations.

We are pleased to provide you with transparent and reliable information on this matter.

Our products and materials are not currently tested or evaluated according to the specific requirements of the China RoHS regulations. The relevant limit values and test methods are not part of our current testing and approval process.

For this reason, we cannot issue a declaration of conformity in accordance with China RoHS requirements.

Regardless of this, we will of course continue to fulfil our obligations under EU chemicals legislation, in particular:

REACH Regulation (EC) No. 1907/2006

RoHS Directive 2011/65/EU (where applicable)

POP Regulation (EU) 2019/1021

as well as other relevant European and international requirements that apply to our products and their areas of application.

If you require China RoHS-compliant materials for specific applications or markets, we will be happy to assist you in evaluating suitable alternatives or obtaining the relevant information from our suppliers.

Please do not hesitate to contact us if you have any questions.

Kind regards,
Your Möller team

Möller-Industrietechnik GmbH
Möller-Metalldichtungen GmbH
