## Information Letter Freedom of LABS

Dear business partners,

Various applications often require LABS-free materials. We would like to take this opportunity to explain transparently how we handle with this issue.

Due to our production processes, we **cannot guarantee** that our materials are **LABS-free**.  
It is therefore not possible to make a blanket declaration that they are LABS-free.

Classification as LABS-free requires that all raw materials, auxiliary materials, tools and manufacturing steps used are free of substances that interfere with paint wetting. These include, in particular, silicones, release agents, oils, greases and migratable additives.

In addition, a binding assurance requires a suitably qualified manufacturing environment and specific cleaning and testing processes.

As our production facilities do **not have a LABS-compliant environment, LABS-specific cleaning procedures or LABS testing in place**, we are unable to issue a binding declaration of LABS-free status.

This information serves to clarify our process conditions and is intended to enable users to make a realistic assessment of the suitability of our materials for LABS-critical applications.

Kind regards,  
Your Möller team
