## Information Letter UK RoHS requirements (UK SI 2012/3032)

Dear business partners,

In connection with international chemical and substance regulations, we regularly receive questions about the classification of our products according to the requirements of the British RoHS regulations ('UK RoHS').

We are pleased to provide you with transparent and reliable information on this matter.

Our products and materials are currently not tested or evaluated according to the specific requirements of the UK RoHS regulations (UK Statutory Instrument 2012 No. 3032, 'Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment Regulations', as amended).

The relevant limit values and test methods for electrical and electronic equipment are not part of our current testing and approval process, as our products do not fall within the scope of the UK RoHS regulations.

For this reason, we cannot issue a declaration of conformity in accordance with UK RoHS requirements.

Regardless of this, we will of course continue to fulfil our obligations under European and international chemicals legislation, in particular:

REACH Regulation (EC) No. 1907/2006

POP Regulation (EU) 2019/1021

RoHS Directive 2011/65/EU (where applicable)

Other relevant requirements that apply to our products and their areas of application

If you require UK RoHS-compliant materials for specific applications or markets, or need information on the suitability of components in electrical/electronic end devices, we will be happy to assist you in evaluating suitable alternatives or obtaining the relevant information from our suppliers.

Please do not hesitate to contact us if you have any questions.

Kind regards,  
Your Möller team
